# Attach Drone to Carriage

**Using 4 zip ties - zip tie each carriage leg to the drone**

**Place drone on-top of carriage (point camera toward green carriage feet) (left image)**

**Push a zip tie through the hole in each carriage top, making a loop over the drone leg. (center image)**

**Tighten the zip tie snug (not super tight) (right image)**

**Cut off excess. To test, simply pickup the drone and make sure carriage is not loose and does not move.**

# NOTES:
