Your Drone Carriage

Above is a photo of an assembled and painted WISP Drone Carriage, that fits under any DJI Phantom 3 Standard Drone.

Depending in your wanted configuration and gear you plan on using, place the green foam pads pointing to the front of the radio, front of drone and or both.

The rubber feet help hold the pads in place. If you need them more secure, use glue . See visit our website and join our forum for ideas on placement of gear for DIY kits @ [wispdrone.co](http://www.wispdrone.co)

NOTES:
